THE SHORT-RUN DEMAND
FOR WORKERS AND HOURS
THE SHORT-RUN DEMAND FOR WORKERS AND HOURS

RAY C. FAIR

AMSTERDAM • LONDON
INTRODUCTION TO THE SERIES

This series consists of a number of hitherto unpublished studies, which are introduced by the editors in the belief that they represent fresh contributions to economic science.

The term economic analysis as used in the title of the series has been adopted because it covers both the activities of the theoretical economist and the research worker.

Although the analytical methods used by the various contributors are not the same, they are nevertheless conditioned by the common origin of their studies, namely theoretical problems encountered in practical research. Since for this reason, business cycle research and national accounting, research work on behalf of economic policy, and problems of planning are the main sources of the subjects dealt with, they necessarily determine the manner of approach adopted by the authors. Their methods tend to be “practical” in the sense of not being too far remote from application to actual economic conditions. In addition they are quantitative rather than qualitative.

It is the hope of the editors that the publication of these studies will help to stimulate the exchange of scientific information and to reinforce international cooperation in the field of economics.

THE EDITORS
To JMF
This study is a revised version of my Ph.D. thesis submitted to the Department of Economics at the Massachusetts Institute of Technology in 1968. I owe a great deal of gratitude to Professors Franklin M. Fisher, Edwin Kuh, and Robert M. Solow for their many helpful comments and suggestions throughout the course of this work. I would also like to express my appreciation to William D. Nordhaus for help at various points in this study. Most of the computer work was done on the IBM 7094 computers at MIT and Princeton University. The research for this work was partly sponsored by the National Science Foundation and the Woodrow Wilson National Fellowship Foundation, to whom I am grateful. The revision was sponsored by a grant from the Office of Manpower Policy, Evaluation, and Research of the US Department of Labor.

## Chapter 1

### INTRODUCTION

1

## Chapter 2

### Description and Critique of Previous Studies

5

2.1. Introduction 5

2.2. Description of the models similar to the basic model 6

2.3. Critique of the models similar to the basic model 17

2.4. Description of other studies of employment fluctuations 26

2.5. Summary 31

## Chapter 3

### A THEORETICAL MODEL OF THE SHORT-RUN DEMAND FOR PRODUCTION WORKERS

32

3.1. Introduction 32

3.2. Some empirical evidence on short-run fluctuations in output per man hour 33

3.3. The notation 36

3.4. The concept of excess labor 37

3.5. The short-run production function 41

3.6. The measurement of excess labor 47

3.7. The short-run demand for production workers 50

3.8. The expectational hypotheses 55

3.9. Summary 57

## Chapter 4

### THE BASIC RESULTS FOR PRODUCTION WORKERS

59

4.1. Introduction 59

4.2. The data 59
Chapter 5

Tests of Various Hypotheses Regarding the Short-Run Demand for Production Workers

5.1. Introduction
5.2. The short-run substitution of hours for workers
5.3. Tests for cyclical variations in the short-run demand for production workers
5.4. The effect of the unemployment rate on short-run employment decisions
5.5. The relationship of the excess labor model to a lagged adjustment model
5.6. Alternative distributed lags
5.7. Possible capacity constraints
5.8. Summary

Chapter 6

Production Decisions and the Short-Run Demand for Workers

6.1. Introduction
6.2. The Holt, Modigliani, Muth, and Simon model
6.3. An alternative model of the short-run demand for production workers
6.4. The data
6.5. Equation estimates
6.6. Bureau of Census data
6.7. Summary

Chapter 7

The Short-Run Demand for Hours Paid-for per Worker

7.1. Introduction
7.2. The theoretical model
7.3. The basic results
7.4. Tests for cyclical variations in the short-run demand for hours paid-for per worker
7.5. Summary

Chapter 8

The Short-Run Demand for Total Man Hours Paid-for

8.1. Introduction
8.2. A comparison of the demand for workers and the demand for hours paid-for per worker
LIST OF TABLES

2.1. Notation used in ch. 2 ........................................... 6
2.2. The percentage changes from the trough month to the peak month of the year in $Y$, $M$, and $HP$ for the years 1950, 1955, 1960, and 1964 ................... 21
2.3. Parameter estimates for eq. (2.37)' .......................... 23
2.4. Parameter estimates for eq. (2.37)" .......................... 24
3.1. Notation used in ch. 3 ........................................... 36
4.1. The seventeen industries considered in this study .......... 60
4.2. Strikes involving 10,000 or more workers .................... 64
4.3. Parameter estimates for eq. (3.9)' under the expectation hypothesis which gave the better results for each industry .................. 66
4.4. Parameter estimates for eq. (3.9)' with $a_1\log M_{2ut-1}$ replacing $a_1(\log M_{2ut-1} - \log M^*_{2ut-1}H^*_{2ut-1})$ ............... 70
4.5. Parameter estimates for eq. (3.9)' with $a_1(\log M_{2ut-1} - \log M_{2ut-2})$ replacing $a_1(\log M_{2ut-1} - \log M^*_{2ut-1}H^*_{2ut-1})$ .................. 74
4.6. Parameter estimates for eq. (3.9)' under the alternative (and inferior) expectation hypothesis to that used in table 4.3 for each industry .................. 78
4.7. Parameter estimates for eq. (3.9)' under the assumptions made in eq. (4.1) about expectations. Estimates presented only for the coefficients of the expectation variables .................. 82
5.1. Parameter estimates for eq. (3.9)' with the additional term $a_2\log HP_{2ut-1}$.
Estimates presented for $a_1$ and $a_2$ only ...................... 87
5.2. Parameter estimates for eq. (3.9)' with the additional term $a_2(\log HP_{2ut-1} - \log HP_{2ut-2})$. Estimates presented for $a_1$ and $a_2$ only ...................... 89
5.3. Parameter estimates for eq. (3.9)' with the additional terms $a_4(\log P_{at} - \log P_{at-1}) + a_5(\log P_{at} - \log P_{at-1})$. Estimates presented for $a_1$, $a_2$, $a_4$, and $a_5$ only ...................... 92
5.4. Parameter estimates for eq. (3.9)' with the additional term $a_3D_t$. Estimates presented for $a_3$, $a_4$, and $a_5$ only ...................... 94
5.5. Parameter estimates for eq. (5.1). Estimates presented for $\eta \eta$ only ...................... 99
5.6. Parameter estimates for eq. (3.9)' with the additional term $a_4(\log M_{2ut-2} - \log M^*_{2ut-2}H^*_{2ut-2})$. Estimates presented for $a_5$ and $a_7$ only ...................... 104
5.7. Parameter estimates for eq. (3.9)' with the additional term $a_4(\log M_{2ut-1} - \log M^*_{2ut-1}H^*_{2ut-1})$. Estimates presented for $a_5$ and $a_7$ only ...................... 106
5.8. Parameter estimates for eq. (3.9)' with the additional term $a_5DK_t$. Estimates presented for $a_5$ and $a_7$ only ...................... 108
6.1. Additional notation used in ch. 6 .............................. 120
6.2. Parameter estimates for eq. (6.7)' .............................. 123
6.3. Parameter estimates for eq. (6.8)' .............................. 124
6.4. Parameter estimates for eq. (3.9)' .............................. 125
6.5. Parameter estimates for eq. (3.9)' using (a) FRB or RMA data and (b) Bureau of Census data ...................... 129
6.6. Parameter estimates for eq. (6.8)' using Bureau of Census data ...................... 130
Parameter estimates for eq. (6.7)' using Bureau of Census data  

Values of $H_{P2et}$ and $H_{Q2et}$ for 1962  

Parameter estimates for eq. (7.2)'  

Parameter estimates for eq. (7.2)' with the additional term $a_{5}B_{t}$. Estimates presented for $\gamma_{0}$ and $a_{5}$ only  

Parameter estimates for eq. (7.2)' with the additional terms $a_{4}(\log P_{it} - \log P_{it-1})_{-}$ and $a_{5}(\log P_{it} - \log P_{it-1})_{-}$. Estimates presented for $\gamma_{0}$, $a_{4}$, and $a_{5}$ only  

Parameter estimates for eq. (7.2)' with the additional term $a_{6}D_{t}$. Estimates presented for $\gamma_{0}$ and $a_{6}$ only  

Sum of the coefficient estimates in table 4.3 and table 7.2: derived coefficient estimates for the total man-hours paid-for equation  

Parameter estimates for eq. (3.9)' under the assumption of first-order serial correlation of the residuals  

Parameter estimates for eq. (7.2)' under the assumption of first-order serial correlation of the residuals  

Sum of the estimates of $a_{1}$ in table 4.3 and table 9.2 and the estimate of $a_{5}$ in table 9.2: derived coefficient estimates for the total man-hours paid-for equation  

Correlation between the residuals of eq. (3.9)' and the residuals of eq. (7.2)' for each industry  

Parameter estimates for eq. (3.9)' using the two-stage Aitken estimator for each industry  

Parameter estimates for eq. (7.2)' using the two-stage Aitken estimator for each industry  

Correlation between the residuals of eq. (3.9)' or eq. (7.2)' for one industry and the residuals of eq. (3.9)' or eq. (7.2)' for another industry  

Parameter estimates for eq. (3.9)' using the two-stage Aitken estimator for three sets of industry groups  

Parameter estimates for eq. (7.2)' using the two-stage Aitken estimator for three sets of industry groups  

Estimates of $\gamma_{0}$ and of the amount of specific training required for fourteen industry groups  

Estimates of $\gamma_{0}$ and of the percent of workers employed in establishments in which the majority of workers are unionized for ten industry groups  

Estimates of $\gamma_{0}$ and of the average wage level for the seventeen industries  

Parameter estimates for eq. (10.1)'  

Appendix  

A-1. Industries for which data were converted to average daily rates  

A-2. Internal Revenue Service data on the number of cigarettes produced and shipped  

A-3. Internal Revenue Service data on the number of cigars produced and shipped  

A-4. Rubber Manufacturers Association data on the number of tires produced and held in inventory  

A-5. Bureau of Mines data on the amount of cement produced and held in inventory
LIST OF FIGURES

2.1. The relationship between the effective wage per man hour, \( w_{H_t} \), and the number of hours worked per worker, \( H_t \), in Ball and St Cyr's model .... 10
2.2. Wilson and Eckstein's man-hour requirements functions ....... 28
3.1. Expected relationship between output per man hour and output for any one year .......... 33
3.2. Observed relationship between output per man hour and output for each year for each of the seventeen industries ......... 34
3.3. Expected relationship between output per paid-for man hour and output on the assumption of constant returns to scale .......... 44
6.1. Holt, Modigliani, Muth, and Simon's overtime cost approximation .... 113
