- For Tables 1.1.3, 1.3.3, and 3.10.3, the respective raw data variable was created by multiplying the quantity index for a given quarter by the nominal value of the variable in 2012 and then dividing by 100.
- For Table 5.7.6, there is an “A” table and a “B” table. The “A” table is used for data prior to 1998:1, and the “B” table is used for data from 1998:1 on.
- S&L = State and Local Governments.
- R87–R92: Same value for all four quarters of the year. See variables R193–R198 for construction of variables SIHG, SIHS, SIFG, SIGG, SIFS, SISS.

- The variables in the first column are the variables in the model. They are defined by the identities in Table A.3 or by the raw data variables in Table A.5. A right hand side variable in this table is a raw data variable unless it is in italics, in which case it is a variable in the model. Sometimes the same letters are used for both a variable in the model and a raw data variable.
